Full Stack Developer

I'm a Full Stack Developer with strong frontend and backend skills who loves building powerful, elegant products with 6+ years of experience in the tech industry

Professional Summary

Results-oriented and innovative software engineer with 6+ years architecting and shipping scalable full-stack systems in production. Deep expertise across Node.js, Python, TypeScript, React.js, and backed by strong fundamentals in distributed data (MongoDB, PostgreSQL), cloud infrastructure on GCP, Azure and AWS, modern CI/CD and automated testing practices. Track record of owning services end-to-end — from technical design through deployment — for products used by thousands of users, and of driving delivery in Agile teams through clear technical decisions and pragmatic trade-offs.

Work Experience

Full Stack Developer | Feb 2025 - Now
[Broadsheet Media](#), Melbourne, Australia

**BROADSHEET
MEDIA**

▪ Technologies

Next.js, React.js, TypeScript, Node.js, Python, PostgreSQL, Redis, GCP, Docker, Kubernetes, CI/CD, Jest

- Developed responsive and scalable website using Next.js, TypeScript, integrated with RESTful APIs and Redis for improving performance.
- Developed scalable RESTful APIs using Node.js, TypeScript for providing dynamic data to UI side.
- Integrated AI coding tools into daily workflow such as Claude Code, Codex and Cursor, increasing efficiency and speeding up development.
- Designed PostgreSQL database schemas, manipulated and queried data using SQL.
- Leveraged event-bus service using Message Queue, ensuring scalability and high availability.
- Deployed web app and backend API services on GCP using Cloud Run, GKE, VM and Pub/Sub
- Built CI/CD pipelines for CMS and other services utilising container techniques such as docker, Kubernetes.
- Developed unit tests using Jest and Python, ensuring high code quality and high availability of microservices.
- Collaborated in an Agile environment and cooperated with cross-functional teams, ensuring the product meets the users' need.
- Participated in code review, improving and ensuring the quality of the code.

Full Stack Developer | Dec 2023 – Dec 2024

[AnyStay](#), Brisbane, Australia (Remote)

Anystay

AnyStay is an online innovative e-commerce platform for short-term and long-term stays, including hosts and guests system, sales, member portal and membership management.

- Technologies
React.js, Redux, Node.js, Python, GraphQL, DynamoDB, AWS, CI/CD, Jest, Selenium
- Developed responsive web application utilizing React.js (Redux), integrated with GraphQL and executed the implementation of RESTful APIs using Node.js.
- Designed DynamoDB table structures and access patterns, optimizing partition/sort key choices and indexes, supporting high-throughput read/write workloads at low latency.
- Architected an event-driven service bus on top of a Message Queue to decouple core systems.
- Executed CI/CD pipelines to deploy the frontend on AWS Amplify and the backend on AWS Lambda.
- Conducted automated tests using Python Selenium and unit tests using Jest.
- Directed projects within a fast-paced Agile environment, consistently meeting deadlines.
- Collaborated with UX/UI designers and cross-functional teams, crafting outstanding user interfaces and experiences.
- Participated in comprehensive code reviews, enhancing code quality, optimizing design patterns, and reinforcing system architecture.

Full Stack Developer | Jul 2023 – Dec 2023

ByteDance, Beijing, China (On Site)

Leading tech company that leverages data and AI to innovate social media platforms and enhance user engagement through content discovery

- Technologies
React.js, TypeScript, Node.js (Express.js), Python, PostgreSQL, Redis, Kafka, Docker, Kubernetes, Terraform, CI/CD, Jest
- Developed web middleware using React.js, Typescript, RESTful API using Node.js (Express.js) and PostgreSQL.
- Designed PostgreSQL schemas and tuned indexes and queries for the middleware data layer, supporting reliable read/write performance across services.
- Leveraged Redis to implement a queue system and reduce the latency of middleware by 60%.
- Introduced an event-driven architecture using Message Queue to decouple core services, improving system scalability under high-throughput workloads.
- Containerized middleware and API services with Docker and orchestrated deployments via Kubernetes, ensuring consistent runtime across dev/staging/prod.
- Built and maintained CI/CD pipelines for deploying both frontend and backend services, with Terraform managing cloud infrastructure as code for reproducible environments.
- Crafted automated API tests and unit tests, using Python and Jest.
- Participated in an Agile environment, consistently delivering projects and actively meeting deadlines.

Lead Full Stack Developer | Nov 2020 – Nov 2022

Kexing EasyGo, Beijing, China (Remote)

Designing mobile applications for University of Queensland students that consolidates essential academic tools into a user-friendly platform for managing grades, deadlines, schedules, and course evaluations.

- Technologies
React.js, React Native, TypeScript, TailwindCSS, Redux, Node.js, PostgreSQL, MongoDB, Kafka, AWS, Docker, Kubernetes, Terraform, CI/CD, Jest, Selenium, Postman
- Crafted frontend app using React.js, TailwindCSS, TypeScript and Redux, implemented RESTful APIs using Node.js and TypeScript.
- Built an event-bus service on Kafka to handle pub/sub messaging across microservices, supporting durable event processing and reducing tight coupling between backend components.
- Containerized services with Docker and orchestrated them on Kubernetes on AWS, supporting reliable horizontal scaling across environments.
- Integrated CI/CD pipelines and provisioned cloud infrastructure with Terraform, enabling reliable, repeatable deployments of frontend and backend services.
- Established a unit testing standard using Jest across frontend and backend, integrating it in-to CI, enforcing coverage thresholds and catch regressions early.
- Led a team of front and backend developers, conducted code reviews and provided technical support.

Full Stack Developer | Jan 2021 – Jan 2022

Graviti, Shanghai, China (Hybrid)

Graviti is a technology company dedicated to transforming AI development by providing next-generation tools for efficient dataset acquisition, storage, and processing, empowering industries with artificial intelligence.

- Technologies
React.js, TypeScript, Python, Golang, MongoDB, RabbitMQ, Docker, Kubernetes, CI/CD, Jest
- Designed and developed a dashboard using React.js and TypeScript, and crafted a distributed web crawling system using Python.
- Customized API Gateway and developed RESTful APIs with Golang.
- Designed MongoDB document schemas for crawled datasets, applying indexing strategies to support efficient querying across large unstructured data volumes.
- Built an asynchronous job queue with RabbitMQ to coordinate distributed crawlers and down-stream data processing, decoupling crawl scheduling from data ingestion
- Packaged services with Docker and deployed via Kubernetes for elastic scaling of crawler workers under variable load.
- Wrote unit tests for crawler modules and Golang API services, integrating them into CI to enforce coverage before merge.
- Operated within a dynamic Agile environment, consistently completing tasks within 2-week sprint intervals.
- Coordinated efforts with UX/UI designers, product managers, and multidisciplinary teams to achieve exceptional user-centered designs.

Full Stack Developer | Nov 2018 – Nov 2020

HD EDU, Shenzhen, China (Hybrid)

HD EDU, is a leading platform, committed to providing a transformative customer experience for global university students in their academic studies, personal growth and career development.

- Technologies
React.js, Node.js, Python, MongoDB, RabbitMQ, AWS, Jenkins, CI/CD, Unit Tests.
- Developed and designed the website app using React.js, along with RESTful APIs using Node.js.
- Orchestrated web scraping automation using Python, gathering and consolidating publicly available data from multiple universities.
- Designed MongoDB schemas for course content, student records, and consultation data, applying indexing strategies, keeping queries responsive as the dataset grew.
- Integrated RabbitMQ for asynchronous background processing scraping jobs, decoupling user-facing requests from long-running tasks.
- Deployed web and API services to AWS (EC2, S3, RDS) and managed environment configuration for staging and production.
- Set up Jenkins CI/CD pipelines for automated build, test, and deployment of the website and API services, reducing manual release overhead.
- Designed and carried out automated tests with Python to validate the website's reliability and performance.

Professional Skills & Tools

- Languages
Python, JavaScript, TypeScript, Golang
- Web tech
Jest, RESTful API, Redux
- Front end
HTML5, CSS3, jQuery, Next.js, React.js, React Native, Node.js, Typescript, Bootstrap, TailwindCSS
- Messaging
RabbitMQ, Redis, Pub/Sub, SQS, Kafka
- DB
PostgreSQL, MongoDB, DynamoDB, RDS, Cloud SQL
- Cloud
AWS, Azure, GCP, Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, Terraform
- Tools
Expo, Git, Jenkins, Jira, Figma, Postman

Education

Master of Information Technology (Artificial Intelligence)
University of Melbourne, Australia

Bachelor of Engineering (Electrical Engineering)
University of Queensland, Australia
